

Potential Substances in Water

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- **Microbial contaminants**, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- **Inorganic contaminants**, such as salts and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, and farming.
- **Pesticides and herbicides**, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- **Organic chemical contaminants**, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.
- **Radioactive contaminants**, which can be naturally-occurring or be the result of oil and gas production and mining activities.
- **Drinking water**, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline (800-426-4791).

2015 Water Quality Report

**Sign up Today for the
Meter to Main Service Plan**

As another fiscal year comes to a close for the District, we are pleased to report that the Dracut Water Supply District was recognized by the Massachusetts Water Works Association this year at their annual meeting in November. ***The District received the “Community Award” that goes to a community water system that exemplifies the highest standards of water works practice.*** This award recognizes the Districts hard work and dedication to bring you the best water possible.

The District strives to continue to improve ways to better serve our customers. That starts with the Water Commissioners outstanding leadership followed by the dedicated team of employees that are here to serve you 24 hours a day—365 days a year.

The financial audit report shows a strong financial picture with credit going to the careful management of spending along with consistent and fair implementation of the District’s bill collection procedures. Revenues not spent are being saved in special accounts that will help pay for the many improvements the District still needs to accomplish in the future.

The District has implemented monthly commercial billing. This will help our commercial customers to see their water bill as a regular monthly utility bill and hopefully has made it easier for these customers to pay their water bills. It also helps the District with a regular monthly income stream to help pay our bills.

We pledge to continue to work on the behalf of all the District customers and we welcome your constructive criticism in order to improve the efficiency of the District operations.

— *Water Commissioners Robert Corey, William Morin, William “Zee” Zielinski*

The Dracut Water Supply District Working for You!

The Dracut Water Supply District provides water to most of the residents and businesses in almost two thirds of Dracut as well as areas of Tyngsboro. The District has 3 sources of water—one well field in Dracut, one well field in Tyngsboro and we purchase supplemental water from the City of Lowell. To deliver the water we have 3 water storage tanks, 7 booster pump stations, 8 pressure zones with over 100 miles of mains. Our water system has been in the process of and continues to upgrade, add and install new water distribution improvements to better serve you—our customers. We are excited to present our 2015 Water Quality Report. The report presents important information about our operations, the quality of the water provided and useful tips on water use. This report will be sent every year to keep you updated with system upgrades and your most recent water quality information. A special thanks to our staff and our customers who help to continue the success story of the ‘New and Improved Dracut Water Supply District’.

Important Health Information

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

“We never know the worth of water till the well is dry.” —THOMAS FULLER

Want More Information?

Do you want to learn more about your drinking water? Do you have questions regarding this report? The Dracut Water Supply District responds to all concerns, questions and comments. Please contact the DWSD office at 978-957-0441 or via e-mail to frontdesk@dracutwater.com.

The main office & field office buildings are located at 59 Hopkins St., Dracut. Water Commissioner Board meetings are usually held the second and fourth Wednesday of each month at 7:00 p.m. in the field office conference room. The office receives calls 24 hours a day including weekends and holidays with after business hours going to the “emergency call service.” Whatever your water needs might be—it’s just a phone call away.

Source Water Assessment Protection (SWAP)

The SWAP program was established under the Federal Safe Drinking Water Act. Call the office for a copy of the District’s SWAP Report or check out the report on our website at www.dracutwater.com. For additional information on water quality visit the Mass.gov website.

Water Supply Sources & Swap Susceptibility

Well Name	Source ID#
Zone II #: 555	Susceptibility: Moderate
New Boston Well Field #2R	3079000 09G
New Boston Well Field #1	3079000 03G
Zone II #: 556	Susceptibility: High
Frost Road Well #1	3079000 04G
Frost Road Well #2	3079000 05G
Frost Road Well #3	3079000 06G
Frost Road Well #4A/#4B	3079000 10G/11G
Frost Road Well #5	3079000 08G

Water Quality Test Results

Regulated Substance	Highest Level Detected	Highest Level Allowed (EPA's MCL) *	Ideal Goals (EPA's MCLG) *	Range	Violation	Date	Major Sources
Sodium	60.0 ppm	no MCL	none set	27.2 to 60.0	NO	9/15/15	Erosion of natural deposits; Runoff from orchards; Waste from electric and glass production.
Radium 226	0.2 pCi/L *	5 pCi/L	0 pCi/L	n.d. * to 0.2	NO	9/1/2011 ^c	Erosion of natural deposits
Gross Alpha	0.7 pCi/L	15 pCi/L	0 pCi/L	n.d. * to 0.7	NO	8/4/14	Erosion of natural deposits
Fluoride	1.3 ppm	4 ppm	4 ppm	0.14 to 1.3	NO	2/18/15	Water additive which promotes strong teeth; Erosion of natural deposits; Discharge from fertilizer and aluminum factories
Copper	0 of 34 ^b 416 ppb	1,300 ppb (Action Level)*	1,300 ppb	n.d. to 416	NO	8/5/2013 ^c	Corrosion of household plumbing systems; Erosion of natural deposits; Leaching from wood preservatives.
Lead	0 of 34 ^b 0.0 ppb ^d	15 ppb (Action Level)*	0	n.d. to 0.0	NO	8/5/13	Corrosion of household plumbing systems; Erosion of natural deposits
Sulfate	16.5 ppm	no MCL	none set	8.9 to 16.5	NO	9/15/15	Erosion of natural sources
Nitrate	1.31 ppm	10 ppm	10 ppm	0.84 to 1.31	NO	9/15/15	Runoff from fertilizer use; Leaching from septic tanks sewage; Erosion of natural deposits
Total Trihalomethanes (TTHM)	50.0 ppb ^d	80 ppb	0	n.d. to 50.0 D	NO	9/11/2008 ^c	By-product of drinking water chlorination
Haloacetic Acids (HAAS)	15 ppb	60 ppb	0	n.d. to 15.0 D	NO	5/15/2008 ^c	By-product of drinking water chlorination
Manganese	683 ppb	50 (Secondary MCL)	300 (EPA Health Advisor)	87 to 683	YES	5/14/15	Erosion of natural deposits.
Chlorine Residual	1.6 ppm	4 ppm	4 ppm	0.0 to 1.6	NO	1/21/15	By-product of drinking water disinfection
Total Trihalomethanes (TTHM)	55.5 ppb ^d	80 ppb	0	n.d. to 55.5D	NO	2015	By-product of drinking water chlorination
Turbidity A	99.8%	TT = percentage of samples less than 0.5 NTU	TT	0.04 to 0.5	NO	2015	Soil runoff
	0.5						
Haloacetic Acids (HAAS)	12.9 ppb ^d	60 ppb		0 to 12.9D	NO	2015	By-product of drinking water chlorination
Chlorine Residual	1.3 ppm	4 ppm	4 ppm	0.5 to 1.3	NO	2015	By-product of drinking water disinfection
Chlorite	0.43 ppm	1.0 ppm	0.8 ppm	n.d. to 0.43	NO	2015	By-product of drinking water disinfection
Perchlorate	0.31 ppb	2.0 ppb	none set	N/A	NO	2015	Rocket propellant, fireworks, numitions, flaires, blasting agents. Aged water treatment disinfection chemicals
Nitrate	0.007 ppm	10 ppm	10 ppm	N/A	NO	2015	Runoff from fertilizer use; Leaching from septic tanks sewage; Erosion of natural deposits
Fluoride	1.1 ppm	4 ppm	4 ppm	0.62 to 1.1	NO	2015	Water additive which promotes strong teeth; Erosion of natural deposits; Discharge from fertilizer and aluminum factories
Gross Alpha	0.04 (+-0.6)	15 pCi/L	0 pCi/L	N/A	NO	2014 ^c	Erosion of natural deposits
Radium 228	-0.2(+/-0.6)	5 pCi/L	0 pCi/L	N/A	NO	2014 ^c	Erosion of natural deposits
Sodium	28.0 ppm	no MCL	none set	N/A	NO	2015	Erosion of natural deposits; Runoff from orchards; Waste from electric and glass production.
Sulfate	5.0 ppm	no MCL	none set	5.0	NO	2015	Erosion of natural sources
Chloroform	38.3 ppb	no MCL	none set	n.d. to 38.3	NO	2015	By-product of drinking water chlorination
Bromodichloromethane	17.5 ppb	no MCL	none set	n.d. to 17.5	NO	2015	By-product of drinking water chlorination
	0 of 52						Corrosion of household plumbing systems; Erosion of natural deposits; Leaching from
Copper	48 ppb	1,300 ppb (Action Level)*	1,300 ppb	n.d. to 48	NO	2015	wood preservatives.
	0 of 52						
Lead	0.001 ppb ^d	15 ppb (Action Level)*	0	n.d. to 0.001	NO	2015	Corrosion of household plumbing systems; Erosion of natural deposits

Listed above are 17 regulated & unregulated contaminants for which monitoring was required and detected in Dracut and Lowell drinking water. Not listed are over 100 other contaminants monitored but not detected.

* DEFINITIONS:

Maximum Contaminant Level (MCL) – The highest level of a contaminant that is allowed in drinking water.

Maximum Contaminant Level Goal (MCLG) – The level of a contaminant in drinking water below which there is no known or expected risk to health.

Maximum Residual Disinfection Level (MRDL) – The highest level of a disinfectant (chlorine) allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfection Level Goal (MRDLG) – The level of a drinking water disinfectant (chlorine) below which there is no known or expected risk to health. MRDLG's do not reflect the benefits of the use of disinfection to control microbial contaminants.

ppm – part per million

ppb – part per billion

n.d. – none detected

Action Level – The concentration of a contaminant which triggers a treatment or other requirement that a water system must follow.

Treatment Technique (TT) – A required process intended to reduce the level of a contaminant in drinking water. The City is required under the Surface Water Treatment Rule to filter the source of the City's drinking water, the Merrimack River, to reduce contaminant levels such as turbidity.

NTU – Nephelometric Turbidity Unit measures the characteristic or property of water that causes it to scatter or absorb light. This is usually caused by very small particulate matter suspended in the water.

SPECIAL EXPLANATIONS:

Results represent water pumped from Dracut Water Supply District (DWSD) wells.

Results represent water purchased from City of Lowell.

A Turbidity is a measure of the cloudiness of the water. It is monitored because it is a good indicator of the effectiveness of the Water Treatment Plant filtration system.

B This is the number of sites above the action level.

C This is the most recent test result required by EPA Regulations.

D Highest Level Detected & Range are not always the same because results are averages or 90th percentile.

UNREGULATED OR SECONDARY SUBSTANCE: MANGANESE

Level Detected: 683 ppb

Secondary MCL: 50

EPA Health Advisory: 300

Range: 87–683

Date: 5/14/15

Major Sources: Erosion of natural deposits

DEFINITIONS:

Maximum Contaminant Level (MCL) – The highest level of a contaminant that is allowed in drinking water.

ppb – part per billion

SPECIAL EXPLANATIONS:

Results represent water pumped from Dracut Water Supply District Wells.

Water Quality Testing Results

Several times each year, your water is collected and tested for over 120 possible impurities. The table (above) provides information about substances that have been detected in the most recent water quality testing. Some of the tests were completed in years other than 2015. Because the water delivered to you could have come from either Lowell or Dracut or be a mix of the two, the data presented in the table represents the results of testing done by the Lowell Regional Water Utility and the Dracut Water Supply District. If you are interested in more information about the source of your water, contact the Dracut Water Supply District (978-957-0441).

Water Quality Information

In order to ensure that tap water is safe to drink, the MADEP and EPA prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. The Food and Drug Administration (FDA) and the Massachusetts Department of Public Health (DPH) regulations establish limits for contaminants in bottled water that must provide the same protection for public health. We treat our water according to EPA's regulations.

How Do We Treat Your Water?

In order to ensure that tap water is safe to drink and in compliance with federal and state regulations, your water receives a variety of treatments including potassium hydroxide and phosphate for corrosion control as well as fluoride to prevent tooth decay/cavities. Lowell water is filtered and treated by the City of Lowell.

Water Conservation Tips

Weather continues to be a factor all over the nation. Water, once thought of as an unlimited resource, now proves itself to be more precious and vital than ever. Given that, it is upon all of us to use it wisely. To that end the Dracut Water Supply District encourages all its consumers to use water conservation measures, some of which are listed below.

Water Conservation Outside

- ◆ Minimize the size of your lawn as lawn watering may consume more than 30% of summer residential water use.
- ◆ Use mulch around plants and shrubs and choose plants that don't need much water.
- ◆ Use water from a bucket to wash your car, and save the hose for rinsing.
- ◆ Sweep clippings and leaves from walks and driveways rather than using the hose.
- ◆ Dracut's Outside Watering Guidelines allow odd numbered houses on Wed, Fri, and Sun and even numbered houses on Tues, Thurs, and Sat. No watering on Mondays.

In the event time restrictions are required customers will be notified in the local news media along with community signs.

- ◆ Underground sprinkler systems require moisture sensors.

Water Conservation in Your Home

- ◆ Fix leaking faucets, pipes, toilets, etc.
- ◆ Install water-saving devices in faucets, toilets and appliances.
- ◆ Wash only full loads of laundry.
- ◆ Don't use the toilet for trash disposal.
- ◆ Take shorter showers.
- ◆ When washing hands, brushing teeth or shaving, use only as much water as you need.

Message from the EPA

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Dracut Water Supply District is responsible for providing high-quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at www.epa.gov/safewater/lead.

Visit Us on the Web www.dracutwater.com

The District rolled out a new and improved web page that is more user friendly. One of the new features includes enhanced customer account information access and payments through Invoice Cloud.

Once you register your account on-line, you can make payments, review your invoice payment history, go paperless and schedule automatic payments. It's fast,

easy, safe, secure and eco-friendly. Check out the "On-Line Payment" link on the District's home page at www.dracutwater.com.

Important Information about Your Drinking Water

Availability of Monitoring Data for Unregulated Contaminants for Dracut Water Supply District

As required by US Environmental Protection Agency (EPA), our water system has sampled for a series of unregulated contaminants. Unregulated contaminants are those that don't yet have a drinking water standard set by EPA. The purpose of monitoring for these contaminants is to help EPA decide whether the contaminants should have a public health protection standard.

What should I do?

You do not have to do anything but as our customers you have a right to know that these data are available.

You may share this information with other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, food establishments, medical facilities and businesses).

For more information

For additional information on your water and the unregulated contaminants we sampled for, see your water department's Consumer Confidence Report (CCR), or called a water quality report, delivered by your water department by July 1 of each year. If you have any questions about your CCR, see the contact information below for your water department.

The table of unregulated contaminants detected can be found on the reverse side of this public notice.

For information on the Unregulated Contaminant Monitoring Program, visit the MassDEP website (<http://www.mass.gov/eeal/agencies/massdep/water/drinking/water-systems-ops.html>) and navigate to Unregulated Contaminant Monitoring Program.

If you want to speak with someone at the Water District about the results, please contact the office at 978 957-0441 59 Hopkins St., Dracut, MA 01826.

This notice is being sent to you by Dracut Water Supply District, PWS ID# 3079000
Date distributed: June 2016

2015 DRACUT WATER SUPPLY DISTRICT UNREGULATED CONTAMINANTS MONITORING RULE (UCMR3) CONTAMINANTS DETECTED

Unregulated contaminants are those for which EPA has NOT established drinking water standards. The purpose of unregulated contaminant monitoring is to assist EPA in determining their occurrence in drinking water and whether future regulation is warranted.

UNREGULATED CONTAMINANTS	RANGE DETECTED PPB	AVERAGE PPB
chromium-6	< 0.03 - 0.06	0.052
chromium (total)	< 0.2 - < 0.2	< 0.2
cobalt	< 1 - < 1	<1
